**Tips to
write
Better
JavaScript**

1

Use meaningful variable names to enhance code readability.

2

Embrace arrow functions for concise and clear anonymous functions.

3

Keep functions short and focused on a single task (SRP).

4

Prioritize 'const' over 'let' to prevent accidental reassignment.

5

Leverage template literals for more readable and flexible string formatting.

6

Follow the DRY (Don't Repeat Yourself) principle to avoid code duplication.

7

Utilize array methods like 'map', 'filter', and 'reduce' for cleaner loops.

8

Practice defensive coding by validating inputs and handling errors gracefully.

9

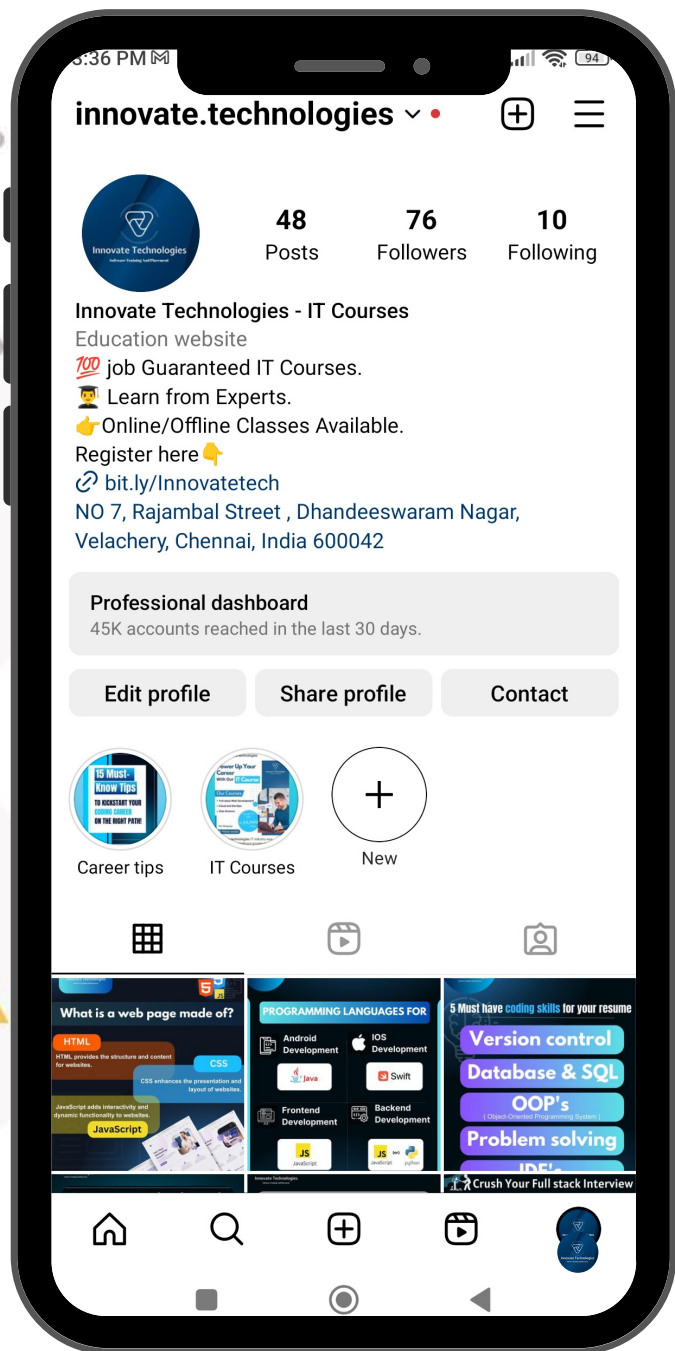

Modularize code with ES6 modules for better organization and encapsulation.

10

Always test your code and seek opportunities for optimization.
